

Science Fiction: Future fact?

Is science fiction the harbinger of doom, an idle story or future fact? Science fiction has enthralled its audience since Mary Shelly animated a monster, Jules Verne put a man on the moon and H. G. Well invaded the earth with Martians. This presentation will look at the link between science fiction and science fact, particularly in robotics. Will robots be able to replace mankind? Will they be smarter than us? Will robots be independent or have a hive mentality? Find out about robots today and the possibilities of tomorrow.

The Science and Fiction of Robotics

Dr. Matthew Joordens

School of Engineering, Deakin University

Thursday 3 October 4-6pm
Phoenix Gallery

Please RSVP by Friday 27 Sept:
