Security, Race, Biopower

Essays on Technology and Corporeality

- ▶ Provides interdisciplinary perspectives on security, race and risk
- ▶ Provokes debate about the future of disciplinary work in these areas
- ▶ Draws on a wide range of case studies, including HIV-prevention drugs, Indigenous sovereignty and lifestyle apps

"Security, Race, Biopower: Essays on Technologies and Corporeality provides a power account of how, in the global present, biopolitical technologies actualize the logic of obliteration, the operative element in the grammar of raciality. Together the histories, geographies, and case studies assembled in this volume expose how biopolitical equipments, procedures, and processes always already presuppose racial difference and cultural difference as the fundamental descriptors of the threatening global Other. This book is, by far, the best deployment of Foucault's notion of biopower in the study of security as the privileged mode of management of global subaltern populations."

- Dr. Denise Ferreira da Silva, Director, The Social Justice Institute (GRSJ), University of British Columbia, Canada

This book explores how technologies of media, medicine, law and governance enable and constrain the mobility of bodies within geographies of space and race. Each chapter describes and critiques the ways in which contemporary technologies produce citizens according to their statistical risk or value in an atmosphere of generalised security, both in relation to categories of race, and within the new possibilities for locating and managing bodies in space. The topics covered include: drone warfare, the global distribution of HIV-prevention drugs, racial profiling in airports, Indigenous sovereignty, consumer lifestyle apps and their ecological and labour costs, and anti-aging therapies.

Security, Race, Biopower makes innovative contributions to multiple disciplines and identifies emerging social and political concerns with security, race and risk that invite further scholarly attention. It will be of great interest to scholars and students in disciplinary fields including Media and Communication, Geography, Science and Technology Studies, Political Science and Sociology.
